Don't forget to break lines and always give credits to your references

If you want to make a demonstration and split it in different steps you can use the command

`\step`

For example:

**Passo 1:** First we need have an equation

$$f(x) = 0$$

**Passo 2:** Then we can set a value to our  $x$

$$x = 1$$

**Passo 3:** Finally in our last step we calculate the result

$$f(1) = 0$$
